THE ANALYST METHOD

Excel - Focus Optimization

✓ Increase speed
✓ Reduce error susceptibility
✓ Improve quality of work

– We will show you how to efficiently navigate within Excel and introduce you to our optimized setup. This will enable you to significantly boost your speed

– We will share THE key principals of modelling, break down its key components, and point out the do's and dont's by taking apart financial models

– You will learn how to model properly, and thereby, not only improve the quality of your work, but moreover, reduce the likelihood of committing mistakes

– Moreover, we will teach you how to systematically review Excel files which will further reduce error susceptibility

I. Optimize Setup

101 Efficient Navigation
102 Calculations - Sheet Mode
103 Calculations - Cell Mode
104 Data Entry Optimization

II. Optimize Navigation

105 Program Settings
106 Quick Access Bar
107 Styles
108 Template
109 Template Print-Readiness
110 Working with Templates

III. How to model

111 Structure Conventions
112 Calculation Nesting
113 Color Coding Conventions
114 Calculation Conventions
115 Inputs, Notes and Comments
116 Linking Conventions

IV. How to audit

117 Auditing Preparation
118 Automatic Checking
119 Manual Checking
120 Testing
